PROFESSIONAL SUMMARY

Software, DevOps, and automation engineer with 10+ years across software delivery, production operations, infrastructure, and networking. Builds Python/FastAPI tools and C#/.NET applications, automates delivery and operational workflows, and supports production releases and database migrations. Brings hands-on troubleshooting, observability, security remediation, and internal developer tooling, including AI-assisted engineering with human review.

PROFESSIONAL EXPERIENCE

Stellantis Financial Services US

Feb 2023 - Present

Production Support Engineer - DevOps & Automation | Auburn Hills, MI · Remote

- Built Python automation, FastAPI dashboards, and an ASP.NET Core support portal for operational workflows and engineering visibility; scripted retirement of 300+ unused legacy applications.
- Designed delivery standardization for a ~60-application .NET estate: created 56 Azure DevOps build/release definitions across 28 applications and reusable automation. Verified 27/28 builds, dry-run validated 25/28 deployment paths, and identified six latent delivery defects before rollout; first deployment pending approval.
- Lead weekly production releases, database migrations, and SLA-driven incident triage; troubleshoot application, API, SQL Server, OAuth/IAM, configuration, and network issues.
- Remediated exposed credentials across 100+ repositories, including Git history, and built Key Vault migration/rollback tooling with integrity validation and credential/PII safeguards.
- Co-led production/test server migration and DR work across Windows Server, IIS, Active Directory, firewall, database, and load-balancer layers; helped coordinate a zero-downtime cutover.
- Built AI-assisted knowledge and incident-triage tooling that synchronizes Jira, Confluence, and SharePoint context with credential, PII, provenance, and engineer-review controls.

HBK - Hottinger Brüel & Kjær

Jul 2020 - Feb 2023

DevOps Engineer - Python Automation | Southfield, MI · Remote

- Created Python/Tkinter XML-output automation that reduced data-processing time by 60%; automated SQL output processing to save more than 40 hours per month.
- Developed database-configuration tools to streamline customer onboarding and reduce repetitive environment setup.
- Built NSIS installer/uninstaller packages, maintained Git workflows and developer tooling, and provided live customer troubleshooting.

CORE EXPERTISE

Software & Backend: Python, FastAPI, C#, .NET, ASP.NET Core, SQL Server

DevOps & Delivery: Azure DevOps, CI/CD, Release Automation, YAML Pipelines, Git, GitHub Actions (projects)

Automation: Python, PowerShell, REST APIs, Workflow Automation, Operational Tooling, Repo Automation

Production & Reliability: Azure Monitor, Application Insights, KQL, Structured Logging, Incident Triage, RCA

Infrastructure & Application Operations: Windows Server, IIS, Active Directory, SQL Server, Load Balancers, Firewalls

Security & Identity: Azure Key Vault, Managed Identity, OAuth / IAM, Secrets Remediation, PII Safeguards, Audit Controls

AI-Enabled Engineering (Internal tools & projects): LLM APIs, MCP, RAG, Agent Workflows, Human Review, Engineering Knowledge Systems

Additional Hands-On Technologies (Projects & container-host proof of concept): Docker, Docker Compose, Helm, Rancher Desktop, WSL2

SELECTED ENGINEERING HIGHLIGHTS

Internal Tools & Developer Enablement

- Expanded an internal query extractor into a modular ASP.NET Core portal with per-module access policies and a retained SOX audit trail; added DBA approve-only scripts, live-object diffing, and service-desk request tracking, covered by 156 automated tests.

Tech: C#, Razor Pages, SQL Server, SQLite, xUnit

Security & Rollback Safety

- Built a .NET 8 utility for hash-only secret discovery, classification, Azure Key Vault migration, and integrity-verified rollback, backed by 62 automated tests. Caught and corrected a migration-path integrity flaw before rollout.

Tech: C#, Azure Key Vault, Managed Identity, xUnit

Production Reliability & Observability

- Contributed to the Application Insights proof of concept that became the team standard, drove adoption, added structured logging, and authored the team's reusable KQL library and telemetry-based application sunset list.

Tech: Azure Monitor, Application Insights, KQL, Serilog

SELECTED OPEN-SOURCE ENGINEERING

HowlPlane

github.com/howlcipher/howlplane

- Evolved a shared agent knowledge library into a Python/Go engineering control plane with task routing, review reconciliation, and deterministic verification.
- Built structured evidence recording and human-approval boundaries for consequential actions, alongside shared agent context and GitHub Actions security checks.

Baseball Optimizer

github.com/howlcipher/baseball_optimizer

- Migrated an optimization backend from Python to Rust/Axum with a SQLite-backed REST API, packaged with Docker and Docker Compose.
- Built pytest end-to-end coverage for API and model-evaluation paths and wired it into CI.

EARLIER EXPERIENCE

QA Developer, Intrepid Control Systems

Mar 2020 - Apr 2020

- Wrote Mocha tests and debugged APIs across software and hardware integrations.

Network Engineer, Project Worldwide

Jan 2020 - Mar 2020

- Configured Cisco/Meraki infrastructure and executed multi-state network migrations with minimal downtime.

Network Standards Engineer, Ford Motor Company

Sep 2019 - Dec 2019

- Implemented global network standards, documentation, and IP-management systems.

IT Network Engineer, Trendset Communications Group

Sep 2015 - Jun 2019

- Maintained network standards, configurations, and documentation; supported critical production infrastructure.

EDUCATION & CERTIFICATIONS

M.S. Cyber Defense (In Progress) - Dakota State University

B.S. Information Technology - Colorado State University Global Campus

B.B.A. Business Administration - Rochester College

CCNA (Previously Held) - Cisco Networking Academy (2014 - 2017)
