

WILLIAM ELIAS

DEVOPS & AI AUTOMATION ENGINEER | PLATFORM ENGINEERING | PYTHON | GO

Michigan | Remote | 586.438.6057 | WylElias.123@gmail.com | linkedin.com/in/wylelias | github.com/howlcipher

PROFESSIONAL SUMMARY

DevOps and automation engineer with 10+ years of experience across software delivery, infrastructure, production support, and secure engineering. Currently architecting a reusable Azure DevOps pipeline framework to scale CI/CD from one pipeline to 70+ .NET applications on IIS and building AI-enabled knowledge systems that synchronize Jira, Confluence, and SharePoint context. Combines platform engineering, hands-on operations, and AI-assisted development to eliminate repetitive work and improve reliability.

70+ .NET applications in CI/CD rollout	40+ HOURS saved per month through automation	60% / 30% processing reduction / deployment improvement
--	--	---

CORE EXPERTISE

DevOps & Platform: Azure DevOps, YAML templates, CI/CD, Git, Bitbucket, GitHub Actions, IIS, Windows Server, release management, artifacts, approvals, Docker, Helm

Languages & Automation: Python, Go, PowerShell, SQL, C#, .NET Framework, REST APIs, ETL, configuration-driven services, XML processing

AI & Knowledge Systems: Claude Code skills, LLM API integration, multi-agent orchestration, RAG, ChromaDB, Jira, Confluence, SharePoint, documentation drift detection, prompt engineering

Cloud, Data & Security: Azure Monitor, Application Insights, Key Vault, SQL Server, SQLite, database migrations, Bandit SAST, log monitoring, Cisco, Meraki, VLANs, firewalls

PROFESSIONAL EXPERIENCE

STELLANTIS FINANCIAL SERVICES | Feb 2023 - Present

Production Support Engineer - Automation, DevOps & AI Enablement | Auburn Hills, MI

- Independently architected a reusable Azure DevOps CI/CD framework designed to scale delivery from one pipeline to 70+ .NET applications hosted on IIS, using YAML templates, Python, PowerShell, artifact creation, deployments, and approval gates.
- Built and launched three new application pipelines, increasing live CI/CD coverage from one to four and replacing copy-and-paste setup that introduced human-error risk; rollout across the remaining portfolio is underway.
- Built an employer-owned, self-synchronizing AI knowledge library that ingests Jira, Confluence, and SharePoint content, detects stale documentation and drift, and packages Python, Go, PowerShell, Markdown context, and reusable Claude skills for global integration.
- During an enterprise AI pilot, used persistent system context to accelerate information retrieval and troubleshooting, analyze logs and applications, and draft or close Jira tickets without repeatedly re-entering technical background.
- Created an environment-readiness dashboard that inventories code and runtime versions plus available IIS objects across servers, enabling comparisons between environments before application promotion.
- Built an operations portal that centralizes scattered team links, SQL payloads for DBA approval, and service-ticket status from dependent teams in one searchable location.
- Developed a CI/CD-deployed, configuration-driven Python application running on a VM that is triggered by external code, queries a database, and emails results; also built Go migration utilities with recursive scanning, find/replace, and dry-run modes.
- Created universal IIS error pages that display error-specific guidance and prefill support emails to IT; led weekly releases and implemented database migration strategies between environments with zero data loss.

HBK ENGINEERING SOLUTIONS | Jul 2020 - Feb 2023

DevOps Engineer - Python Automation | Southfield, MI

- Created a Python and Tkinter XML-output automation system that reduced data-processing time by 60%.
- Automated SQL output processing with Python, saving more than 40 hours per month.
- Developed database configuration tools that streamlined customer onboarding workflows and reduced repetitive setup.
- Built NSIS installer and uninstaller packages, maintained Git workflows and developer tooling, and provided live technical troubleshooting for customers.

SELECTED ENTERPRISE SOLUTIONS

AZURE DEVOPS PIPELINE FACTORY | YAML, Python, PowerShell, IIS

- Reverse-engineered the organization's single existing pipeline into reusable templates for .NET applications, with parameterized artifact creation, IIS deployment, and approval controls.
- Launched three new pipelines and established a repeatable onboarding path for the remaining 70+ application portfolio, reducing copy-and-paste configuration and human-error risk.

AI OPERATIONS KNOWLEDGE LIBRARY | Jira, Confluence, SharePoint, Claude skills

- Built one-way content synchronization with documentation-drift detection so stale system knowledge can be identified while current operational context remains rapidly searchable.
- Packaged reusable Claude skills and system context to support log analysis, application troubleshooting, and Jira ticket drafting or closure without repeatedly supplying background information.

ENVIRONMENT RELIABILITY TOOLING | IIS, Python, Go, SQL

- Created environment-comparison dashboards, centralized operations workflows, configuration-driven database reporting, migration utilities with dry-run support, and error-specific IIS support pages.

ADDITIONAL EXPERIENCE

INTREPID CONTROL SYSTEMS QA Developer Mar 2020 - Apr 2020	Wrote Mocha tests and debugged APIs across software and hardware integrations.
PROJECT WORLDWIDE Network Engineer Jan 2020 - Mar 2020	Configured Cisco and Meraki infrastructure and executed multi-state migrations with minimal downtime.
FORD MOTOR COMPANY Network Standards Engineer Sep 2019 - Dec 2019	Implemented global network standards and created scalable documentation and IP-management systems.
TRENDSET COMMUNICATIONS GROUP IT Network Engineer Sep 2015 - Jun 2019	Enforced network standards, maintained configuration files, and supported critical production infrastructure.

SELECTED INDEPENDENT PROJECTS

AI KNOWLEDGE LIBRARY | Python, Go, ChromaDB, Docker, Helm, GitHub Actions

- Architected a multi-agent orchestration platform that routes engineering work across Claude, Gemini, and local Ollama models using shared skills, rules, and project context.
- Implemented hybrid keyword and ChromaDB semantic skill routing to surface relevant domain knowledge while preserving reusable project standards.
- Established production-grade quality with a 148-test Python and Go suite, Bandit SAST scanning, pre-push CI gates, a Go-built CLI installer, and Helm/Docker deployment packaging.

CAREER AGENT CORE | Go, Gemini API, SQLite

- Built a remote-job aggregation and scoring service that evaluates postings against a structured profile, salary floor, and remote-work requirements.
- Created an AI tailoring pipeline that generates customized resumes, cover letters, and interview-preparation materials from job descriptions and candidate data.
- Hardened third-party content handling with prompt-injection quarantine and SSRF protections, and tracked application history in a SQLite WAL-mode dashboard with architecture decisions documented as ADRs.

EDUCATION & CERTIFICATION

M.S. Cyber Defense - In Progress	Dakota State University
B.S. Information Technology	Colorado State University Global Campus
B.B.A. Business Administration	Rochester College
Cisco Certified Network Associate (CCNA) - Previously held	Cisco Networking Academy 2014 - 2017
