PROFESSIONAL SUMMARY

Software, DevOps, and automation engineer with 10+ years across software delivery, production operations, infrastructure, and networking. Builds Python/FastAPI tools and C#.NET applications with Blazor, automates delivery and operational workflows, and supports production releases and database migrations. Brings hands-on troubleshooting, observability, credential remediation, Auth0 identity troubleshooting, and internal developer tooling, including AI-assisted engineering with human review.

PROFESSIONAL EXPERIENCE

Stellantis Financial Services US

Feb 2023 - Present

Production Support Engineer | DevOps & Automation | Auburn Hills, MI · Hybrid

- Built Python automation, FastAPI dashboards, and a .NET 8 Blazor internal portal for operational workflows and engineering visibility; scripted retirement of 300+ unused legacy applications.
- Designed delivery standardization for a ~60-application .NET estate: created 56 Azure DevOps build/release definitions across 28 applications and reusable automation. Verified 27/28 builds, dry-run validated 25/28 deployment paths, and identified six latent delivery defects during pre-deployment validation.
- Lead weekly production releases, database migrations, and SLA-driven incident triage; troubleshoot application, API, SQL Server, Auth0, OAuth/OIDC, configuration, and network issues.
- Built Python tooling to scan source code and Git history for exposed credentials; used BFG Repo-Cleaner to scrub historical records across 100+ repositories, completing the remediation.
- Co-led production/test server migration and DR work across Windows Server, IIS, Active Directory, firewall, database, and load-balancer layers; helped coordinate a zero-downtime cutover.
- Built AI-assisted knowledge and incident-triage tooling that synchronizes Jira, Confluence, and SharePoint context with credential, PII, provenance, and engineer-review controls.

HBK - Hottinger Brüel & Kjær

Jul 2020 - Feb 2023

DevOps Engineer - Python Automation | Southfield, MI · Remote

- Created Python/Tkinter XML-output automation that reduced data-processing time by 60%; automated SQL output processing to save more than 40 hours per month.
- Developed database-configuration tools to streamline customer onboarding and reduce repetitive environment setup.
- Built NSIS installer/uninstaller packages, maintained Git workflows and developer tooling, and provided live customer troubleshooting.

CORE EXPERTISE

Software & Backend: Python, FastAPI, C#, .NET, Blazor, ASP.NET Core, SQL Server, REST APIs

DevOps & Delivery: Azure DevOps, CI/CD, Release Automation, YAML Pipelines, Git, GitHub Actions (projects)

Automation (*Python/PowerShell professionally; Go in projects*): Python, PowerShell, Workflow Automation, Operational Tooling, Go

Production & Reliability: Azure Monitor, Application Insights, KQL, Structured Logging, Incident Triage, RCA

Infrastructure & Application Operations: Windows Server, IIS, Active Directory, SQL Server, Load Balancers, Firewalls

Security & Identity: Auth0, OAuth / OIDC, IAM, Credential Remediation, Git History Remediation, PII Safeguards

AI-Enabled Engineering (*Internal tools & projects*): LLM APIs, MCP, RAG, Agent Workflows, Human Review, Engineering Knowledge Systems

SELECTED ENGINEERING HIGHLIGHTS

Internal Tools & Developer Enablement

- Expanded a query extractor into a modular .NET 8 Blazor Web App using Interactive Server, with per-module access policies, database-backed workflows, and a retained SOX audit trail. Added DBA approve-only scripts, live-object diffing, pre-CAB visibility, and service-desk request tracking.

Tech: C#, .NET 8, Blazor, ASP.NET Core, SQL Server, SQLite

Security & Credential Remediation

- Built Python tooling to scan source code and Git history for exposed credentials; used BFG Repo-Cleaner to scrub historical records across 100+ repositories. A measured work scan processed 2,832 files and identified 67 distinct secrets in approximately 25 seconds.

Tech: Python, Git, BFG Repo-Cleaner

Production Reliability & Observability

- Contributed to the Application Insights proof of concept that became the team standard, drove adoption, added structured logging, and authored the team's reusable KQL library and telemetry-based application sunset list.

Tech: Azure Monitor, Application Insights, KQL, Serilog

SELECTED OPEN-SOURCE ENGINEERING

HowlPlane

github.com/howlcipher/howlplane

- Built a Python/Go engineering control plane that routes work across coding agents, reconciles independent reviews, and runs deterministic verification.
- Added durable evidence recording and human-controlled authority boundaries for consequential actions, with shared project context and CI/security checks.

RedrawUS

github.com/howlcipher/redistricting-map

- Built a multi-state geospatial analysis platform with Python/R data pipelines and an interactive JavaScript map, persistent browser caching, and Web Workers.
- Processes geographic datasets with GeoPandas, Shapely, and GerryChain; includes pytest, Vitest, and Playwright tests for data processing and application behavior.

EARLIER EXPERIENCE

QA Developer, Intrepid Control Systems

Mar 2020 - Apr 2020

- Wrote Mocha tests and debugged APIs across software and hardware integrations.

Network Engineer, Project Worldwide

Jan 2020 - Mar 2020

- Configured Cisco/Meraki infrastructure and executed multi-state network migrations with minimal downtime.

Network Standards Engineer, Ford Motor Company

Sep 2019 - Dec 2019

- Implemented global network standards, documentation, and IP-management systems.

IT Network Engineer, Trendset Communications Group

Sep 2015 - Jun 2019

- Maintained network standards, configurations, and documentation; supported critical production infrastructure.

EDUCATION & CERTIFICATIONS

M.S. Cyber Defense (In Progress) - Dakota State University

B.S. Information Technology - Colorado State University Global Campus

B.B.A. Business Administration - Rochester College

CCNA (Previously Held) - Cisco Networking Academy (2014 - 2017)
