DevOps Engineer | Python, Go, SQL, PowerShell | Automation & CI/CD | Pursuing MS Cyber Defense

PROFESSIONAL SUMMARY

Automation and systems engineer with over 9 years of experience spanning infrastructure automation, DevOps, and production support. Specialized in Python and Go development for APIs, backend systems, and automated deployment pipelines. Proven ability to build secure and scalable solutions that streamline operations across development and production environments. Strong foundation in enterprise networking, security controls, and system integration. Outside of work, directs AI coding agents (Claude Code, Gemini CLI) through prompt engineering to architect, build, and test personal automation platforms end to end. Passionate about writing maintainable code and solving complex technical challenges in security focused environments.

CORE SKILLS

Programming & Development: Python, Go, PowerShell, SQL, REST APIs, ETL

DevOps & Cloud: Azure DevOps, Application Insights, Key Vault, Azure Monitor, CI/CD, Git, Bitbucket, IIS

Systems & Infrastructure: Windows Server, Automation Scripting, Log Monitoring, Job Scheduling

Networking & Security: Cisco/Meraki, VLANs, Firewalls, Packet Capture, Monitoring Tools

Databases: SQL Server, SQLite, Migrations, Stored Procedures, Reporting

AI & Automation: AI-Augmented Development, Prompt Engineering, Claude Code, Gemini CLI, LLM API Integration, ChromaDB/RAG

PROFESSIONAL EXPERIENCE

Stellantis Financial Services

Feb 2023 - Present

Production Support Engineer (Automation & CI/CD) | Auburn Hills, MI

- Developed a Python automation system converting TXT reports to Excel, saving several hours of manual work daily while improving overall system reliability.
- Built custom tools with Go and PowerShell, successfully streamlining deployment processes by 30 percent.
- Implemented database migration strategies between environments with zero data loss.
- Managed IIS applications including configuration, troubleshooting, and performance optimization.
- Led weekly releases and deployments using Git workflows and Bitbucket.
- Built backend scripts for log parsing, anomaly detection, and data validation to support production operations.

HBK Engineering Solutions

Jul 2020 - Feb 2023

DevOps Engineer (Python Automation) | Southfield, MI

- Created an XML output automation system with Python and Tkinter, reducing data processing time by 60 percent.
- Automated SQL output processing with Python scripts, saving over 40 hours monthly.
- Developed custom database configuration tools that streamlined customer onboarding workflows.
- Built installer and uninstaller packages using NSIS scripting for seamless application deployment.
- Maintained version control best practices and developer tooling with Git.
- Provided direct technical support to customers through live interactive troubleshooting sessions.

Intrepid Control Systems

Mar 2020 - Apr 2020

QA Developer | Madison Heights, MI

- Wrote and executed Mocha test cases for internal software applications.
- Debugged and validated API alongside software and hardware integrations.

Project Worldwide

Jan 2020 - Mar 2020

Network Engineer

- Configured Cisco switches and Meraki access points across multiple enterprise company locations.

- Developed comprehensive network documentation standards including specific IP addressing schemes.
- Executed multi state network migration projects with minimal operational downtime.

Ford Motor Company

Sep 2019 - Dec 2019

Network Standards Engineer

- Implemented global network configuration standards across distributed enterprise infrastructure.
- Created documentation templates and IP management databases to scale organizational efficiency.
- Supported large scale network migrations with comprehensive planning and technical execution.

Trendset Communications Group

Sep 2015 - Jun 2019

IT Network Engineer

- Enforced strict network standards and performed comprehensive audits covering ports, IPs, and VLANs.
- Maintained complex configuration files for diverse network equipment environments.
- Provided tier production support for critical network infrastructure and organizational uptime.

PROJECTS

AI Knowledge Library

Multi-agent orchestration platform (Python, Go)

- Directed AI coding agents (Claude Code, Gemini CLI) through prompt engineering to design, implement, and test a platform that routes engineering work across multiple AI providers (Claude, Gemini, local Ollama models) with shared skills, rules, and project context.
- Built a skill-routing system with keyword and ChromaDB semantic-search fallback to automatically surface relevant domain knowledge into AI agent sessions.
- Enforced production-grade quality with a 148-test Python and Go suite, bandit SAST scanning, and pre-push CI gates that block unverified code from shipping.
- Packaged as a Go-built CLI installer with a Helm chart and Docker/GitHub Actions deployment.

Career Agent Core

AI-powered job search assistant (Go)

- Directed AI coding agents (Claude Code, Gemini CLI) through prompt engineering to architect and build a Go service that aggregates remote job postings and scores them against a structured profile, salary floor, and remote-work requirements using the Gemini API.
- Built an AI tailoring pipeline that synthesizes job descriptions against a candidate profile to generate customized resumes, cover letters, and interview prep notes.
- Hardened the system against untrusted third-party content with a prompt-injection quarantine layer and SSRF protections.
- Tracked application history in a SQLite-backed dashboard (WAL mode) with architecture decisions documented as ADRs.

EDUCATION & CERTIFICATIONS

M.S. Cyber Defense (In Progress) - Dakota State University

B.S. Information Technology - Colorado State University Global Campus

B.B.A. Business Administration - Rochester College

Cisco Certified Network Associate (CCNA) - Cisco Networking Academy (2014 - 2017)
