

WILLIAM ELIAS

Senior DevOps & Platform Engineer | AI Automation Specialist

586.438.6057 | WylElias.123@gmail.com | linkedin.com/in/wylelias | github.com/howlcipher

CI/CD // Python + Go // Agentic Systems & AI Security

PROFESSIONAL SUMMARY

DevOps and platform engineer with 10+ years across software delivery, infrastructure, and production support, now specializing in applied AI automation and agentic tooling. Currently architecting a reusable Azure DevOps pipeline framework to scale CI/CD from one pipeline to 70+ .NET applications on IIS, and built an internal AI knowledge platform that self-synchronizes Jira, Confluence, and SharePoint behind ten automated quality, drift, PII, and credential gates, operating inside a GLBA/SOX/SOC 2-regulated environment. Builds agentic tooling for incident triage, automated root-cause analysis, and release workflows that the engineering team runs day to day.

CORE SKILLS

DevOps & Platform: Azure DevOps, CI/CD, YAML Templates, Pipeline as Code, GitHub Actions, Git, Bitbucket, IIS, Windows Server, Docker, Helm, Release Management

AI Engineering & Agentic Systems: Claude Code Skills, Model Context Protocol (MCP), Multi-Agent Orchestration, Context Engineering, LLM API Integration, Prompt Engineering, AI Guardrails, AI Security, RAG, ChromaDB, Jira, Confluence, SharePoint

Languages & Automation: Python, Go, C#, .NET Framework, PowerShell, Bash, SQL, REST APIs, ETL, XML Processing

Cloud, Data & Security: Azure Monitor, Application Insights, KQL, Key Vault, Secret Rotation, SQL Server, SQLite, Database Migrations, Bandit SAST, Credential & PII Scanning, Regulated Environment Controls (GLBA/SOX/SOC 2)

Infrastructure & Networking: Cisco, Meraki, VLANs, Firewalls, Packet Capture, Network Standards

PROFESSIONAL EXPERIENCE

Stellantis Financial Services

Feb 2023 - Present

Production Support Engineer - DevOps & Automation | Auburn Hills, MI

- Independently architected a reusable Azure DevOps CI/CD framework designed to scale delivery from one pipeline to 70+ .NET applications hosted on IIS, using YAML templates, Python, PowerShell, artifact creation, environment-scoped deployments, and approval gates.
- Launched three new application pipelines, taking live CI/CD coverage from one to four, then encoded the onboarding path into AI skills that generate and roll out pipeline definitions per repository, replacing error-prone copy-and-paste setup.
- Built an employer-owned AI knowledge platform that self-synchronizes Jira, Confluence, and SharePoint into a two-layer retrieval architecture, giving 14 engineers grounded production context on demand instead of tribal knowledge.
- Engineered its daily Azure DevOps sync pipeline with ten automated gates covering credential scanning, PII/NPI detection, documentation drift, schema, provenance, and changelog consistency, plus secret-expiry alerting, built in zero-dependency Python for a GLBA/SOX/SOC 2-regulated environment.
- Built a library of AI skills for incident triage, deployment, release notes, and post-mortem review, plus a root-cause-analysis engine that redacts credentials from raw logs, resolves stack frames to source, and emits a Jira payload and runbook, dry-run by default.
- Created an environment-readiness dashboard comparing code and runtime versions and IIS objects across servers before promotion, an operations portal centralizing team links and DBA-approval SQL payloads, and Go migration utilities with dry-run modes; led weekly releases and zero-data-loss database migrations.

HBK Engineering Solutions

Jul 2020 - Feb 2023

DevOps Engineer - Python Automation | Southfield, MI

- Created a Python and Tkinter XML-output automation system that reduced data-processing time by 60%.
- Automated SQL output processing with Python, saving more than 40 hours per month.
- Developed database configuration tools that streamlined customer onboarding workflows and reduced repetitive setup.
- Built NSIS installer and uninstaller packages, maintained Git workflows and developer tooling, and provided live technical troubleshooting for customers.

PROJECTS

Azure DevOps Pipeline Factory

YAML, Python, PowerShell, IIS, AI-driven rollout

- Reverse-engineered the organization's single existing pipeline into reusable templates for .NET applications, with parameterized artifact creation, IIS deployment, and approval controls.
- Turned the rollout itself into automation: AI skills generate a repository's pipeline definition, wire it to its IIS targets, and sweep the remaining 70+ application portfolio one app at a time.

AI Knowledge Platform

Agentic operations tooling on Jira, SharePoint & MCP

- Designed a two-layer retrieval architecture that routes an agent from lightweight index maps to a single deep-dive source file, keeping context lean and answers grounded in real system state rather than model recall.
- Built a library of skills for triage, deployment, release notes, and post-mortem review, plus a log-to-RCA engine that turns a raw stack trace into a Jira payload and runbook, all governed by a daily ten-gate quality pipeline.

Multi-Agent Engineering Library

Open-source AI context system for terminal agents

https://github.com/howlcipher/ai_knowledge_library

- Built a filesystem-based knowledge and rules library that loads one canonical rulebook, skill set, and profile context into Claude Code, Codex, and Gemini CLI alike, so agent behavior stays consistent across every terminal assistant.
- Ships 40 domain skills on a tiered priority model with hallucination guardrails, MCP integrations, and ChromaDB vector-store context pruning, packaged with Docker, Helm, and a cross-platform installer, and guarded by eight GitHub Actions workflows running CodeQL and Bandit SAST, linting, and cross-platform tests.

EDUCATION & CERTIFICATIONS

M.S. Cyber Defense (In Progress) - Dakota State University

B.S. Information Technology - Colorado State University Global Campus

B.B.A. Business Administration - Rochester College

Cisco Certified Network Associate (CCNA) - Previously held - Cisco Networking Academy (2014 - 2017)
