# WILLIAM ELIAS

## PRODUCTION & DEVOPS AUTOMATION ENGINEER

*CI/CD* | *Azure DevOps* | *Automation* | *Reliability* | *Python* | *Production Systems*
Michigan | Open to U.S. Remote Opportunities | WylElias.123@gmail.com
linkedin.com/in/wylelias | github.com/howlcipher | howlcipher.github.io/william_elias

## PROFESSIONAL SUMMARY

Production and DevOps automation engineer working across production operations and software delivery, with a broader infrastructure and networking career dating to 2015. Builds Azure DevOps CI/CD standardization, reusable pipeline templates, release tracking, and Go and Python deployment and operations automation. Troubleshoots production API/integration, database, configuration, and infrastructure issues with Azure Monitor, Application Insights, KQL, structured logging, incident triage, and RCA. Adds credential remediation and OAuth/OIDC work, plus a Windows Server, IIS, Active Directory, SQL Server, and network infrastructure background.

## PROFESSIONAL EXPERIENCE

**Stellantis Financial Services US** Feb 2023 - Present

*Senior Production Support Engineer* | *DevOps & Automation* | *Auburn Hills, MI · Hybrid*

Promoted September 2026; previously Production Support Engineer

- Directed a CI/CD standardization program across a 60-repository, 104-application internal estate, building reusable pipeline/template automation and 56 Azure DevOps build/release definitions across 28 standardized application repositories.
- Executed and validated builds across all 28 repositories (27 passed, with the remaining failure diagnosed and logged); dry-run validated representative deployment paths for 25 of 28, with the remaining checks blocked by upstream/environment or tooling conditions. Reviewed and classified 109 existing definitions, identifying 95 legacy and 14 already-aligned definitions, and resolved several latent delivery defects spanning path-handling assumptions, configuration drift, and false-success states.
- Maintain the release-tracking process for a recurring, roughly weekly production release cadence and participate directly in production deployments. Authored and maintain a reusable 22-query KQL library used across internal monitoring and troubleshooting automation.
- Designed and delivered a Go-based self-service deployment CLI covering the build-to-rollback lifecycle with guided setup, Azure DevOps REST integration, config parsing, pipeline generation, build/push/deploy, rollback, status, audit, and post-deployment validation.
- Built Python/FastAPI dashboards and operational tooling separate from the Blazor portal, spanning Azure DevOps REST API automation, failed-payload triage, scheduled query-to-email reporting, XML integration-log parsing, ranked engineering search, automated RCA, reusable operations CLI functionality, and recurring production-support workflows; standardized the team on uv for Python dependency and tooling management.
- Built Python tooling to scan source code and Git history for exposed credentials and used BFG Repo-Cleaner to scrub historical records across 100+ repositories. A measured scan processed 2,832 files and identified 67 distinct exposed secrets in approximately 25 seconds; remediation records are complete.
- Built and maintain an internal .NET 8 Blazor Web App with Interactive Server, C#, ASP.NET Core, SQL Server, and SQLite for production support, with per-module access policies, database-backed workflows, retained audit history, live configuration/object diffing, pre-change/pre-CAB visibility, and service-desk request tracking.
- Designed a scoped OAuth 2.1 resource server with JWT/JWKS validation, content allowlisting, and explicit token-validation-bypass defenses.

**HBK - Hottinger Brüel & Kjær** Jul 2020 - Feb 2023

*DevOps Engineer - Python Automation* | *Southfield, MI · Remote*

- Created Python/Tkinter XML-output automation that reduced data-processing time by 60%; automated SQL output processing to save more than 40 hours per month.
- Developed database-configuration tools to streamline customer onboarding and reduce repetitive environment setup.
- Built NSIS installer/uninstaller packages, maintained Git workflows and developer tooling, and provided live customer troubleshooting.

## CORE EXPERTISE

**DevOps & Delivery** *(Azure DevOps professionally; containerization proof of concept)***:** Azure DevOps, CI/CD, Release Automation, YAML Pipelines, Git, Containerization

**Production & Reliability:** Azure Monitor, Application Insights, KQL, Structured Logging, Incident Triage, RCA
**Automation & Developer Tooling** *(Python/PowerShell professionally; Go for deployment tooling; uv for Python standardization)***:** Python, PowerShell, REST APIs, Go, uv, Developer Tooling
**Infrastructure & Application Operations:** Windows Server, IIS, Active Directory, SQL Server, Load Balancers, Firewalls, Cisco / Meraki
**Security & Identity:** OAuth / OIDC, IAM, Credential Remediation, Git History Remediation, PII Safeguards, Audit Controls
**Software & Backend:** Python, FastAPI, C#, .NET, Blazor, ASP.NET Core, REST APIs, SQL Server, SQLite

## SELECTED ENGINEERING HIGHLIGHTS

### Production Reliability & Observability

- Troubleshoot production application issues as the primary responsibility, across API/integration, database, configuration, and infrastructure problems, using Azure Monitor, Application Insights, KQL, and structured logging; support data-migration and infrastructure-migration efforts, including scripted data moves and DR-related database migration work.

*Tech: Application Insights, Azure Monitor, KQL, .NET, Python*

### Self-Service Deployment CLI (Go)

- Guided setup and project initialization/scaffolding generate pipeline configuration; Azure DevOps REST integration drives build, push, deploy, rollback, status, and audit; host auditing, fail-fast deployment-path validation, container-lifecycle integration, and automated post-deployment verification are built in.

*Tech: Go, Azure DevOps, REST APIs, CI/CD, IIS*

### Infrastructure Investigation & Modernization

- Investigated server/container migration paths and audited disaster-recovery pipeline definitions to identify broken or obsolete deployment paths and support remediation planning, working across OS configuration, IIS, Active Directory, firewall rules, databases, and load balancers; designed a zero-disk-secret Blazor Web App container migration proof of concept.

*Tech: Windows Server, IIS, Active Directory, PowerShell, SQL Server, Containerization*

## SELECTED OPEN-SOURCE ENGINEERING

### HowlPlane

github.com/howlcipher/howlplane

- Built a Python/Go engineering control plane that routes work across coding agents, reconciles independent reviews, and runs deterministic verification.
- Added durable evidence records, human approval gates for consequential actions, and CI evidence bound to the pull-request head commit.

## EARLIER EXPERIENCE

**QA Developer, Intrepid Control Systems** Mar 2020 - Apr 2020

- Wrote Mocha tests and debugged APIs across software and hardware integrations.

**Network Engineer, Project Worldwide** Jan 2020 - Mar 2020

- Configured Cisco/Meraki infrastructure and executed multi-state network migrations with minimal downtime.

**Network Standards Engineer, Ford Motor Company** Sep 2019 - Dec 2019

- Implemented global network standards, documentation, and IP-management systems.

**IT Network Engineer, Trendset Communications Group** Sep 2015 - Jun 2019

- Maintained network standards, configurations, and documentation; supported critical production infrastructure.

## EDUCATION & CERTIFICATIONS

M.S. Cyber Defense (In Progress, Second Year) - Dakota State University (Expected Winter 2027)
B.S. Information Technology - Colorado State University Global Campus
B.B.A. Business Administration - Rochester College
CCNA (Previously Held) - Cisco Networking Academy (2014 - 2017)
